                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gonadotropin receptors. The novel gonadotropin receptors can be used to screen for ligands of the receptors. This screen may be used in biomedical and biochemical research to develop new drugs targeted to the gonadotropin receptors. For example, hormone analogs which activate or inhibit the function of the gonadotropin receptors or classical dysfunction of the gonadotropin receptors or classical dysfunction of the gonadotropin receptors causes conditions in reproductive tissues. The ligands can be used for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               432
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    233

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC a food supplement. (II) and its binding partners are useful in medical disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations (CC amino acid sequences. ABG00010-ABG30377 represent sees biodiversity at fire specification, but was obtained not sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DAX

This invention describes a novel human G-protein coupled glycoprotein hormone receptor, HG38. Glycoprotein hormone receptors are important in the endocrine system and HG38 may be involved in development and function of the skeletal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and temporal specific expression or activity of the HG38 receptor, as well as for studying the ability of a variety of compounds to act as modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bailey WJ,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                         mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, x, is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence X-(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pronon-endogenous, non-endogenous, or a mixture of endogenous and identifying antagonists, agonists and partial agonists for use as pharmaceutical agents. The mutant proteins are also useful in research settings for elucidating the roles of the receptors in normal and the processing the substituted and partial agonists of the receptors in normal and settings for elucidating the roles of the receptors in normal and the processing the substitute of the receptors in normal and the processing the proteins are also useful in research and partial agonists for such as the processing the
            the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence represents a human wild-type GPCR reto in an exemplification of the invention.
                                                                                                                            diseased conditions. Antagonists for a particular GPCR are useful for treating diseases and disorders associated with that receptor. Because the novel mitter CDCR are consistent associated with that receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAY90683-Y90687), and to DNA encoding them (AAA30779-A307743 and AAA30775-A30779). The mutant proteins of the invention contain a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 1; Page 317-320; 341pp; English

                                                                                                                                                                                                                                                                                                                                                                                 or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Promay be endogenous, non-endogenous, or a mixture of endogenous and non-endogenous residues. The constitutively active GPCRs are useful for identifying antagonists, agonists and partial agonists for use as pharmaceutical agents. The mutant proteins are also useful in research settings for elucidating the roles of the receptors in normal and diseased conditions. Antagonists for a particular GPCR are useful for treating diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. Sequences AAY90643- AAY90677 and AAY90683-Y90687 the mutant the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAY90687), and to DNA encoding them (AAA30709-A30743 and AAA30775-A30779). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, x,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  agonist; antagonist; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO200022129-A1

The novel gonadotropin receptors can be used to screen for ligands of the receptors. This screen may be used in blomedical and blochemical research to develop new drugs targeted to the gonadotropin receptors. For example, hormone analogs which activate or inhibit the function of the gonadotropin receptors or classical gonadotropin receptors may be detected. The altered expression or dysfunction of the gonadotropin receptors causes conditions in reproductive tissues. The ligands can be used for the treatment of
                                                                                                                                                                                                                                                                                                               421
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 18-21; 38pp; English.

The present sequence is a human RECAP (receptors and associated proteins) polypeptide. RECAP polynucleotides and polypeptides are useful in the diagnosis, treatment and prevention of neurological disorders such as stroke, Alzheimer's disease, Pick's disease, Huntington's Couch as stroke, Alzheimer's disease, Downs's syndrome, amyotrophic disease, dementia, Parkinson's disease, Downs's syndrome, amyotrophic lateral sclerosis, multiple sclerosis, bacterial and viral meningitis, CCU (CTPUCTENTALLY) of the provided in the pr

                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a human guanosine triphosphate binding protein coupled receptor. The guanosine triphosphate binding protein coupled receptor protein is useful in the diagnosis, prediction and treatment of disease associated with disorders of G protein coupled receptor protein, and may be useful in brain disease and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New gene encoding guanosine triphosphate binding protein coupled receptor, and the protein and antibodies to it, useful for diagnosis and treatment of disease such as brain disease -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes the isolation of a novel human G-protein coupled glycoprotein hormone receptor, AOMF05 which has anti-obesity and anti-diabetic activity. The AOMF05 gene, receptor and modulators are useful for treatment of pancreatic disease, obesity and diabetes. Glycoprotein hormone receptors are important in the endocrine system and AOMF05 may be involved in development and function of the skeletal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and temporal specific expression or activity of the AOMF05 receptor, as well as for studying the ability of a variety of compounds to act as modulators

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful for treatment of pancreatic disease, obesity and diabetes. Glycoprotein hormone receptors are important in the endocrine system and AOMF05 may be involved in development and function of the skeletal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and temporal specific expression or activity of the AOMF05 receptor, as well as for studying the ability of a variety of compounds to act as modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of AOMF05 receptor activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human AOMF05 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        29-JUN-1999 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW93965;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAW93965 standard;
                                                                                                                                                                                                                                                                                                                                                                 and AOMF05 may be involved in development and function of the skeletal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and temporal specific expression or activity of the AOMF05 receptor, as well as for studying the ability of a variety of compounds to act as modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                       anti-diabetic activity. The AOMF05 gene, receptor and modulators are useful for treatment of pancreatic disease, obesity and diabetes. Glycoprotein hormone receptors are important in the endocrine system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            glycoprotein hormone receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes the isolation of a novel human G-protein coupled glycoprotein hormone receptor, AOMF05 which has anti-obesity and

The AONFOS gene, receptor and modulators are useful for treatment of pancreatic disease, obesity and diabetes olycoprotein hormone receptors are important in the endocrine system and AOMFOS may be involved in development and function of the skelatal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and temporal specific expression or activity of the AOMFOS receptor, as well as for studying the ability of a variety of compounds to act as modulators

            The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comporising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and the proteins are useful in genetic vaccination, testing and

                                                                                                                                                                                                                                                                               the receptor. The polypeptides and/or polynucleotides are also useful for homologous or related genes, producing compositions that modulate functional regions of the receptors, gene therapy, mapping pathways, in vivo prophylactic and therapeutic purposes, as immunogens agents. The polypeptides, and for identifying biologically active transmembrane region and a leucine rich repeat extracellular domain. These regions capture and facilitate optimal orientation of its ligand.
                                                                                                                                                                                                                                                       Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel human G-protein coupled glycoprotein hormone receptor, HG38. Glycoprotein hormone receptors are important in the endocrine system and HG38 may be involved in development and function of the skeletal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and temporal specific expression or activity of the HG38 receptor, as well as for studying the ability of a variety of compounds to act as modulators
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bailey WJ, Liu Q,

  pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                 524.5

1011tropin receptor - pig
follitropin receptor - pig
N; Alternate names: follicle-stimulating hormone receptor
C; Species: Sus scrofa domestica (domestic pig)
C; Date: 16-Nov-1995 #sequence\_revision 08-Feb-1996 #text\_change 21-Jan-2000 Gene 163, 257-261, 1995
A;Title: The porcine follitropin receptor: cDNA cloning, functional expressionand chr A;Reference number: JC4301; MUID:96011644
A;Accession: JC4301 J.J.; Lahbib-Mansais, Y.; Yerle, M.; Bozon, V.; Couture, 3, 257-261, 1995 of the G-protein coupled receptors. It L.; Pajot,
